1 Bridges - Refurbishment/Newbuild

1 Bridges - Refurbishment/Newbuild

The obvious dangers encountered when working next to live road and railways can be dramatically reduced using our restricted access set.

Using a short masted rig enables us to install large diameter piles normally associated with conventional piling, thus delivering a safe engineered solution.

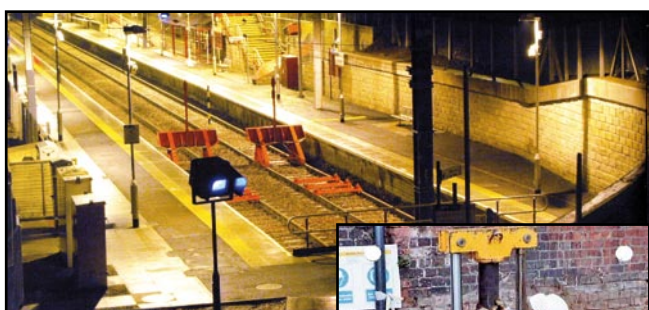

2 Embankments - Soil Nails

2 Embankments - Soil Nails

Roger Bullivant Ltd supplies its own ground anchor bar (Multi Bar). This enables us to provide a cost effective package for the installation of ground anchors and soil nails.

We have the choice of several rigs to install our anchors dependent on: working loads, ground conditions and site access.

3 Platforms/Buildings

3 Platforms/Buildings

Engineers within our industry associate piling with noise, vibration and disruption. Our "Jack-Down" piling minimises all of these problems. We can install complete foundations under existing buildings using this system.
