Installation Process of our
Precast Foundation
system

Precast Modular Foundation

Off site manufactured products

Carry out as built survey and any site design changes

Crop the piles

Place Precast or Insitu Caps

Place Precast RBeam

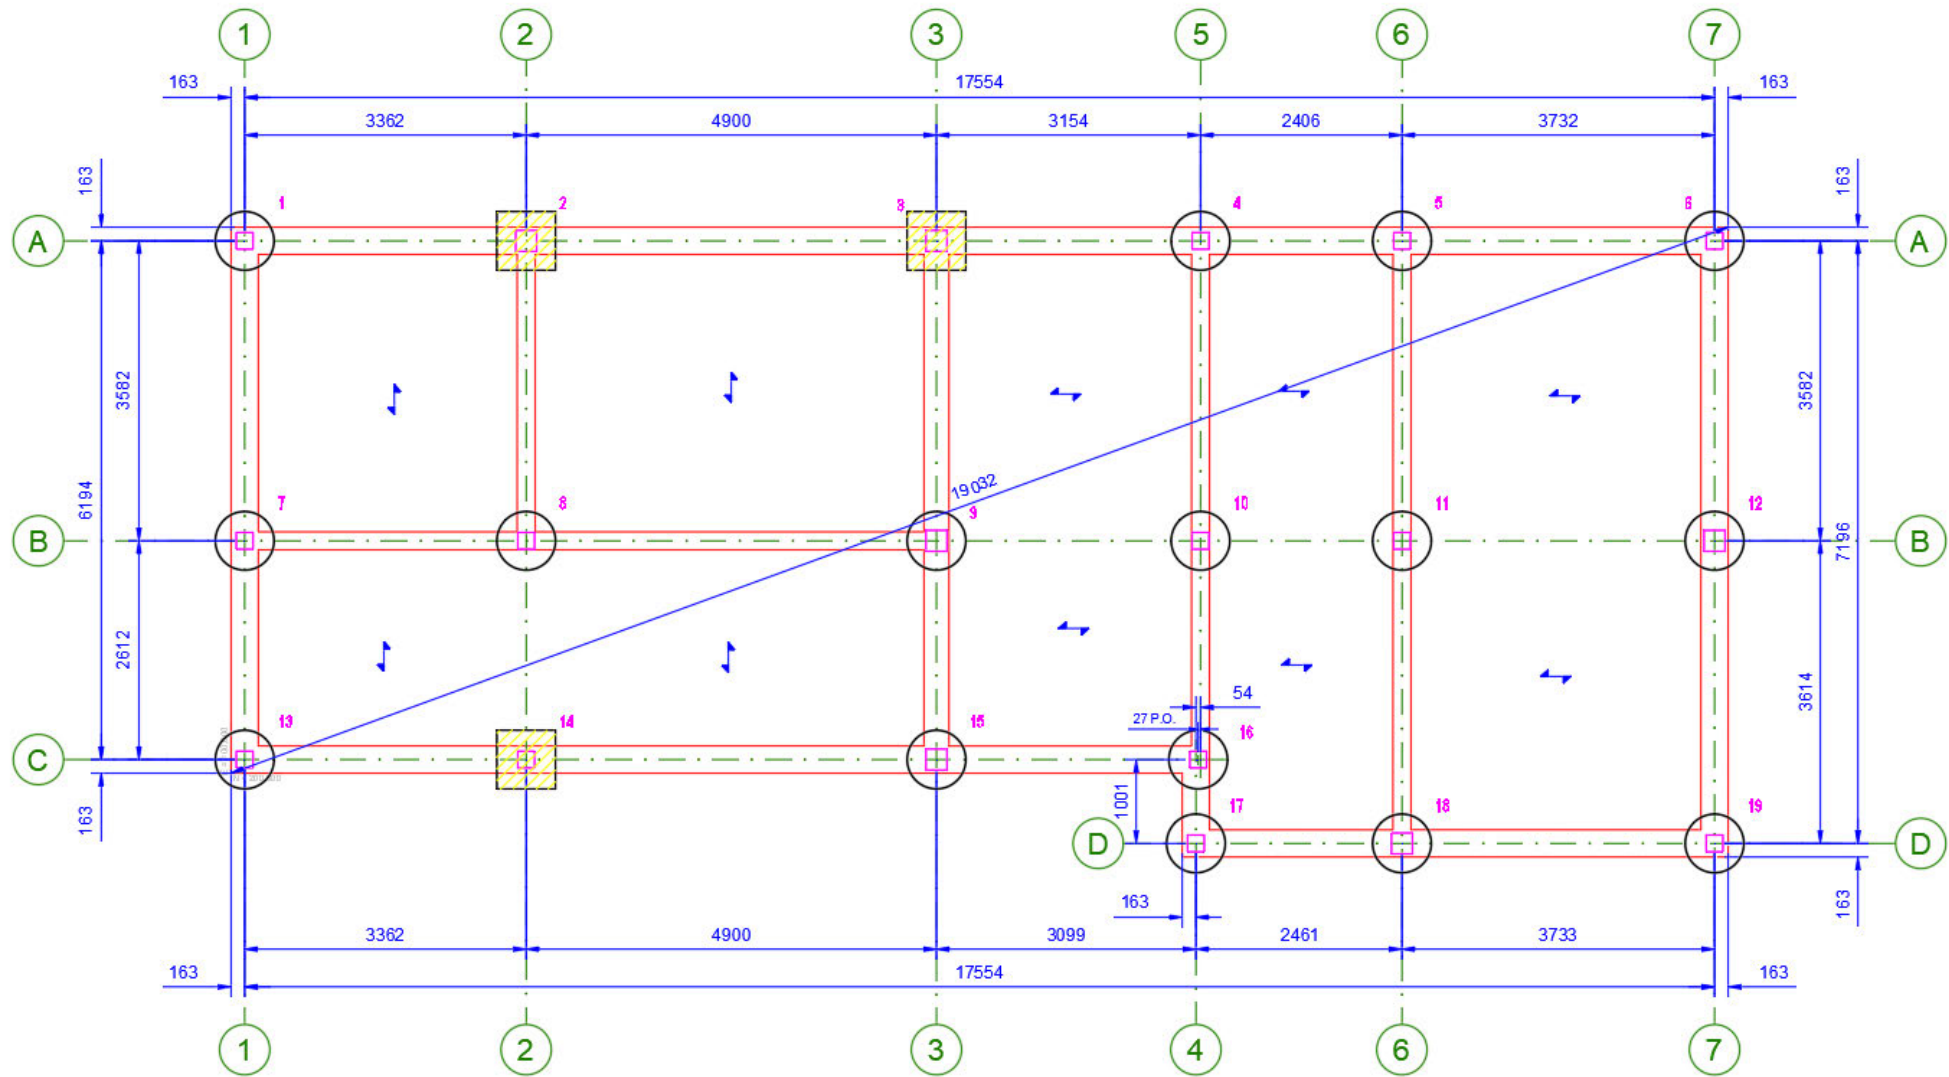

Stitch joints

Precast RBeam section

RBeam Installation Video

Setting out pile positions

Following as built survey of installed piles

Remedial piles installed or 'site design changes' confirmed ready for beam installers arrival

Working platform can be removed and reused

Formation level to be soffit of the RBL Beams

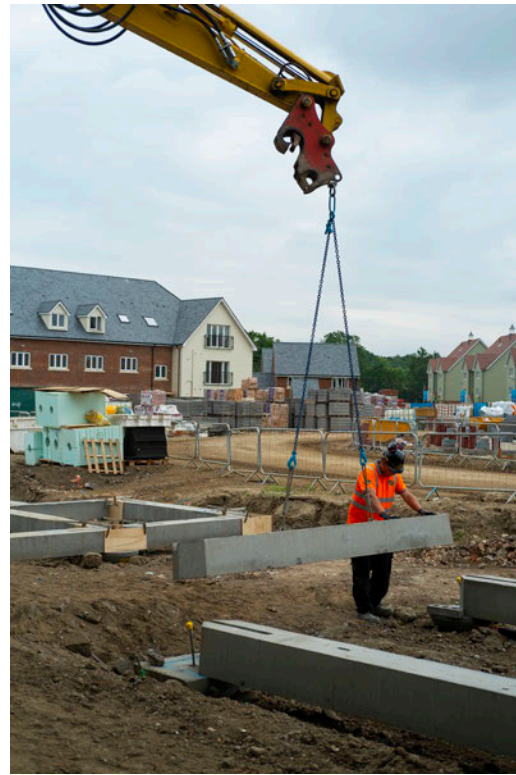

Cropping begins

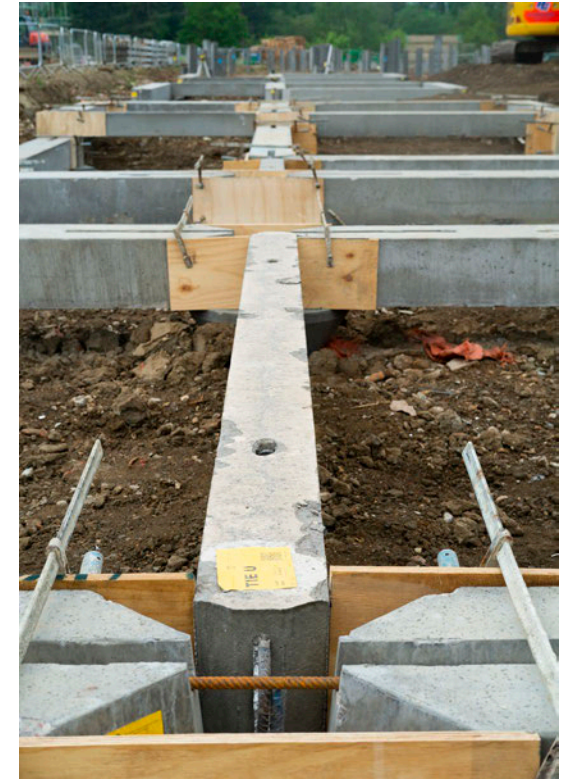

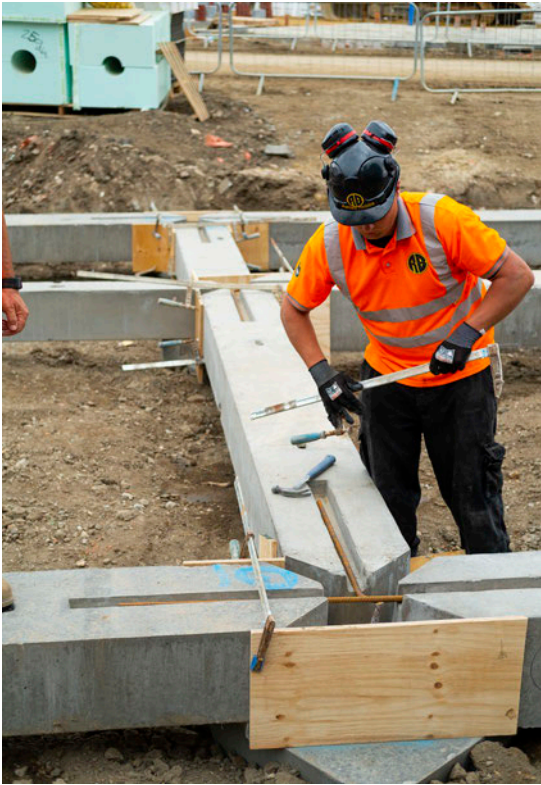

Cropping piles

Beam placement

Shuttering Beams

All stitched ready for concrete

The final completed block as installed

Process Short video of the installation process

Roger Bullivant's involvement throughout the whole project, from the beginning in discussions with both design and site operations, was second to none. Their attention to detail, understanding the site constraints and programme requirements brought their Driven Precast Concrete Pile and RBeam Foundation Package off the drawing board and onto site. The finished product is superb. Our representatives enjoyed working alongside a team that were professional and had excellent Health & Safety Awareness. Part one of works in the Southern Area are now completed and the Northern area is starting later on this month. We look forward to working with the Roger Bullivant team again and cannot recommend their services enough!

Kelly Speller

Commercial, Technical & Construction Director

Testimonial from Nicholas King Homes

Thank you for listening!
We will now move onto a Q&A,
followed by a survey.

All questions are welcome!
